ABOUT US

About Nobody Network

Nobody Network is a **fully decentralized** ecosystem, built on a new Ethereum-EVM branch, combined with a decentralized connectivity infrastructure (connect.nobody.network) to deliver **absolute freedom** and **true anonymity** in both transactions and communications.

— **Nobody Network**

nobody.network

We were established with the purpose of providing an online environment that helps users:

SECURITY
Absolute privacy protection

ANONYMOUS
Communicate and interact completely anonymously

SELF-STORAGE
Your data and you can store it yourself

NO CONTROL
Escape from Big Tech's control

nobody.network

Nobody Network is not just Blockchain, but a truly anonymous and secure communication solution - far beyond current applications, which still require personally identifiable information.

ONE CLICK - TWO WORLDS

IDS wallet will be integrated right into the chat application, easily transferring coins between friends like sending stickers.

DECLARATION OF LIBERTY

"Nobody is Everyone". In Nobody, identity is optional, freedom is the default.

nobody.network

Nobody Network builds a completely decentralized and absolutely secure communication solution - where users have full control over their data.

nobody.network

SIGN UP COMPLETELY ANONYMOUS

You can join chat, voice call, video call, create groups, meetings and interact **without providing any information**, without verifying email or phone number.

Telegram is often considered a highly secure app; however, it **requires users to provide their personal phone number during sign up**, creating the risk of exposing personal information. Nobody Network solves this problem by not asking for any identifying information at all.

nobody.network

DATA IS CONTROLLED BY YOU

Unlike conventional applications, which store your data on "Big Tech" centralized servers, Nobody Network allows **you or your organization to build and operate your own server** to store all data, ensuring absolute control over the data.

You will be completely free from the situation of personal data being illegally exploited, used for advertising or other purposes without your knowledge. Our point of view:

Your data. Your control.

nobody.network

END-TO-END ENCRYPTION REQUIRED

On the Nobody Network, **all communication data is always end-to-end encrypted (E2E) by default**. No one, not even the system administrator, can read the content of other people's messages.

Telegram is still considered a secure app, but most users don't know that Telegram doesn't have end-to-end encryption enabled by default. Users have to proactively enable it in each group - and most don't, leaving information vulnerable to exploitation.

Nobody Network does not allow to disable end-to-end encryption. This is mandatory, always on by default, ensuring absolute privacy for all users.

nobody.network

ONLY YOU CAN READ YOUR DATA

Even if you build a server to store chat data for your organization, you still **cannot read other people's chats**. You can only read your own chats and those related to you, because only you have the secret phrase used to decrypt the data.

This completely prevents misuse of personal data or eavesdropping, **ensuring absolute privacy**.

NO PRIVATE SERVER - YOU ARE STILL FREE TO JOIN

If you don't want to invest or don't have the conditions to build your own server, you can completely create an account on the default server operated by Nobody Network: **connect.nobody.network**.

In addition, you can also choose to create an account on any server invested in by other individuals or organizations and opened for free to the community.

Regardless of which server you choose, all the benefits of security, anonymity, and end-to-end encryption are always fully guaranteed (the server owner cannot read your chat data because it is all encrypted).

nobody.network

CROSS-PLATFORM CONNECTION – UNLIMITED INTERACTION

Nobody Network's communication platform not only limits users within its own network, but also has the ability to seamlessly **connect and communicate with users on other popular platforms** such as **Discord, Slack, Signal, Telegram**, etc.

This makes it easy to stay in touch with friends, colleagues, and partners on whatever platform they're using, while still taking full advantage of Nobody Network's exclusive security, encryption, and privacy benefits.

You can join chat groups, exchange messages, make voice and video calls with users from different platforms, making the communication experience more convenient, easier and more efficient than ever.

nobody.network

The native currency of Nobody Network is **IDS (Intelligent Decentralized Solution)**, born with the goal of providing a truly intelligent, secure and decentralized solution.

+ + +

ROLE

nobody.network

THE ROLE OF IDS COIN

ABSOLUTELY SECURE
Authenticate and record transactions into the blockchain permanently (tamper-proof)

COMMUNITY POWER
Participate in governance through DAO (decentralized autonomous organization)

PROFITABLE STAKING
Participate in staking to support and receive corresponding value

TRADING
Payment means, transactions in decentralized applications (dApps)

PRINCIPLE

Nobody Network's "**Zero-Identity**" Blockchain is a unique network designed with the goal of maximizing user privacy and absolute anonymity. True to its name, **Zero-Identity** aims to allow users to participate and use the Blockchain without revealing any identifying information, even to the system itself.

nobody.network

PRINCIPLE OF OPERATION

Specifically, Zero-Identity Blockchain operates on the following core principles:

- Zero-Knowledge Technology (zk-SNARKs)
- Using Stealth Addresses
- Completely Decentralized
- Absolute Ownership
- Compatibility and Easy Integration

nobody.network

PRINCIPLE OF OPERATION

Zero-Knowledge technology (zk-SNARKs)

It is an advanced technology that allows transactions to be authenticated on the Blockchain without revealing personal information or sensitive data. Instead of sending clear data to the Blockchain, users only send a "proof" that the transaction is valid. This completely prevents the possibility of tracing back to the identity of the sender or recipient.

nobody.network

PRINCIPLE OF OPERATION

Use stealth address

Every time a user makes a transaction, they can generate a completely new wallet address based on HD Wallets or Random Wallets for one-time use for complete anonymity. The number of wallet addresses is **unlimited**.

nobody.network

PRINCIPLE OF OPERATION

Completely decentralization

Nobody Network is a decentralized network, with no central entity controlling or centrally storing transaction data. Anyone can deploy a server to create a node and replicate the entire ledger, and they will receive rewards in IDS coins for validating transactions.

nobody.network

PRINCIPLE OF OPERATION

Absolute ownership

You are the only one who has access and control over your assets through your secret phrase. Even if you or your organization builds your own server to create a node to store data, you still only have rights to your own assets. No one else has the ability to decrypt or access your assets, including system administrators or other community servers.

nobody.network

PRINCIPLE OF OPERATION

Compatibility and ease of integration

Zero-Identity Blockchain is fully compatible with Ethereum's EVM standard, allowing for easy migration or integration of existing dApps to Nobody Network. This helps the ecosystem grow rapidly, ensuring maximum benefits for the community and users.

nobody.network

With the above principles, Nobody Network's Zero-Identity Blockchain is not just a technological solution, but also a **powerful statement** about privacy and freedom online.

"You don't have to be anybody to be free. At the Nobody Network, you have complete control over your identity and assets."

— Nobody Network

nobody.network
